1 All the new features we've made

- Movies and series can be now added to our page.
- Episodes can be added to these series.
- In addition, each user can add well-translated movies to their movie list or series list, as well as be able to edit and delete them.

2 Changes we have made compared to the previous deliverable

- We have removed the distributor template and replaced it with a text field from the Movie template.
- As for the API (<http://www.omdbapi.com/>), we have decided to show an option every time you type, that is, now it will no longer show a list.
- For the implementation of the views it has been decided to use, as far as possible, class-based views, but to facilitate the solution, some have been implemented with functions. To have more control of the template.

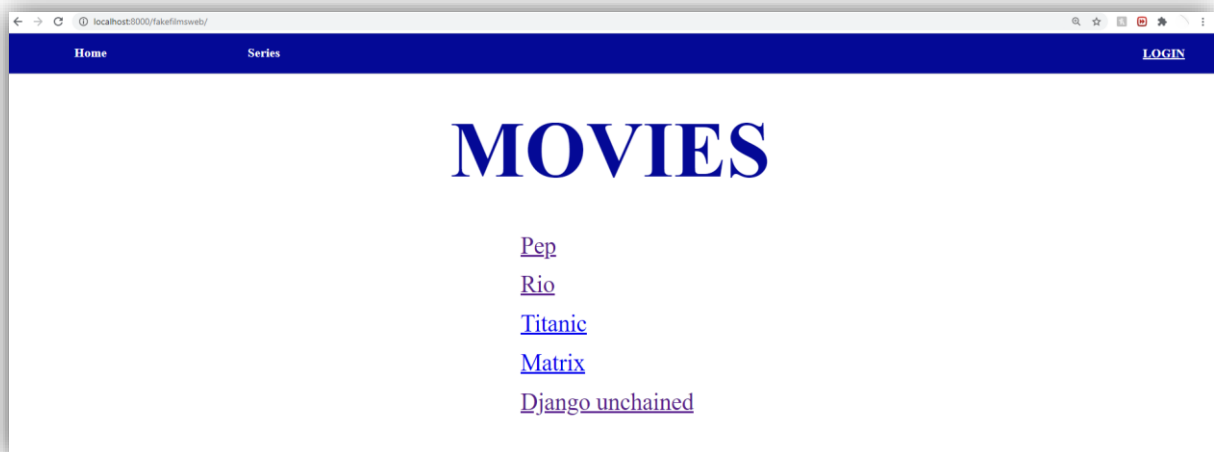

3 Project Guide

Let's go to localhost: 8000, where we see our project as a guest user, where we find:

- Home: we find MOVIES, a list with a set of movies. We can click on each movie and tell us its director, category, and year of release.
- Series: we find SERIES, a list with a set of series. We can click on each series and it tells us in which category it belongs and how long it lasts.

Below is a list of episodes where, if we click on any of them, it tells us what series they belong to, what season, and how many episodes it is.

That's all we can do as guest users.

1 Initial home page: MOVIES

2 Movie information

If we log in with our user we see that in the header next to Home and Series we have two new sections. These are My movies and My series:

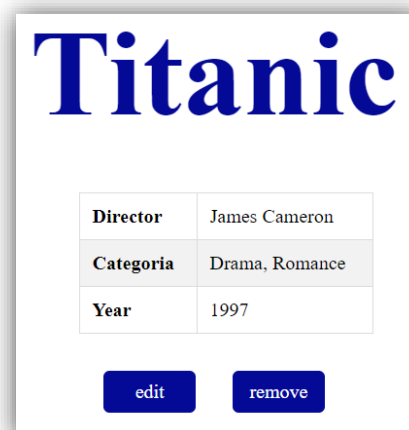

- My movies: contains a list of movies, initially empty, where you can add movies. These are added from the MOVIES list (Home section) by clicking on the + symbol that each movie has at the end of its name.
- My series: contains a list of series, initially empty, where you can add series. These are added from the SERIES list (Series section) by clicking on the + symbol that each series has at the end of its name.

3 User: admin, My series

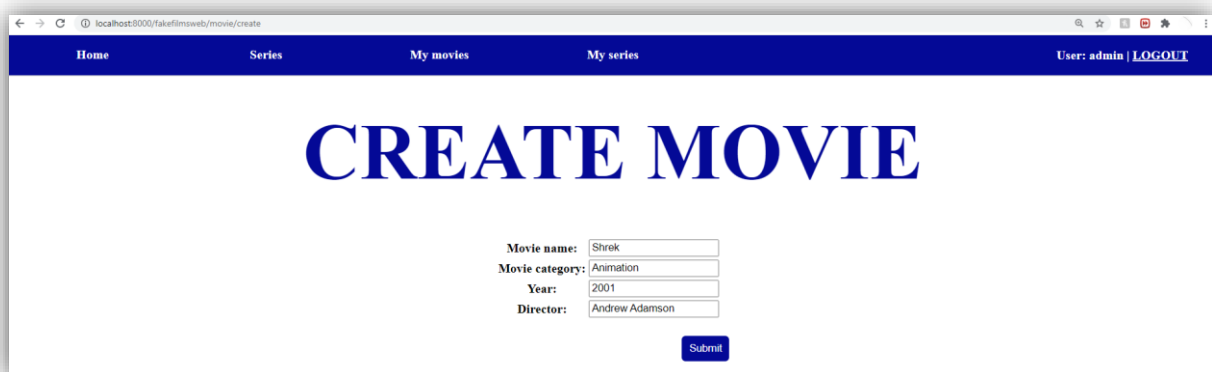

In the other sections, Home and Series we can appreciate a few differences:

- Home:
 - + We can click the movies that are on the MOVIES list and let us edit or delete them. If we press delete we simply make the movie in question disappear from the movie list. If instead, we want to edit it what we will do is change the fields Movie name, Movie category, Year and Director, and after pressing Submit these will be overwritten on the previous values.

4 User: admin, Movie information

- + We see that unlike when we were as a guest user, there is a set of + symbols at the end of each movie and the end of the MOVIES title as well. We will delve into the latter as in My movies we have already said that it was the + symbol after each film.
- + We have a new section called CREATE MOVIE where we have to fill in the fields Movie name, Movie category, Year and Director. In the end, we would click Submit and go back to Home and the new movie we just created would appear.

The screenshot shows a web browser window with the URL `localhost:8000/fakefilmsweb/movie/create`. The page has a dark blue header with navigation links: [Home](#), [Series](#), [My movies](#), and [My series](#). On the right of the header, it says "User: admin | [LOGOUT](#)". The main content area is white and features the title "CREATE MOVIE" in large, bold, blue serif font. Below the title is a form with four labeled input fields: "Movie name:" (containing "Shrek"), "Movie category:" (containing "Animation"), "Year:" (containing "2001"), and "Director:" (containing "Andrew Adamson"). A blue "Submit" button is located at the bottom right of the form.

5 User: admin, Create movie

- Series:
 - + We can click the series that are in the SERIES list and let us edit or delete them. If we press delete we simply make the series in question disappear from the list of series. If instead, we want to edit it what it will let us do is change the fields Series name, Category, Year, and Number of seasons and pressing Submit these will be overwritten on the previous values.
 - + Also, when you press the series, an extra field called EPISODES LIST appears, where we will see a list of episodes of the series. We can add new episodes to the series by clicking add episode and filling in the Season, Number, and Name fields. After doing the Submit, the chapter is automatically added to the list. Also if we click on any episode we have the ability to delete it using the delete key.

6 User: admin, Serie information

- + We see that unlike when we were as a guest user, there is a set of + symbols at the end of each movie and at the end of the SERIES title as well. We will delve into the latter as in My series we have already said that it was the + symbol after each film.
- + We see a new section called CREATE SERIES where we have to fill in the fields Series name, Category, Year, and Number of seasons. In the end, we would click Submit and return to Series and the new series we just created would appear.
